AI word wall

Every new word in the course

Word	Meaning
Accuracy	The share of test examples the model gets right, as a percentage.
Artificial intelligence (AI)	Computer systems that do tasks that normally need human thinking, such as recognising pictures or understanding words.
Bias	When an AI treats some people or things unfairly, usually because of its data.
Chatbot	A program you talk to in sentences; modern ones use a language model.
Confidence	How sure a model is about its prediction.
Confusion matrix	A table showing which groups a model mixes up.
Data	Facts, numbers, pictures or words that a computer can learn from.
Decision boundary	The border where the prediction flips from one group to another.
Decision tree	A model that predicts by asking a chain of yes-or-no questions.
Deepfake	A fake photo, video or voice of a real person, made with AI.
Distance	How different two examples are. Small distance means very similar.
Feature	One measurable thing about an example, such as size, colour or number of legs.
k-nearest neighbours (k-NN)	Predict by letting the k most similar examples vote.
Label	The right answer for an example, such as “cat” or “dog”.
Language model	An AI that has learned which words tend to follow which, so it can predict the next word.
Machine learning	A computer learning patterns from examples instead of being given every rule.
Model	What the computer builds when it learns. You give it a new example and it gives you a prediction.
Pixel	One tiny square of a digital picture (short for “picture element”).
Prediction	The model’s answer for something new.
Privacy	Keeping your personal information under your control.
Prompt	The message or instruction you give an AI.
Resolution	How many pixels a picture has, such as 1920 × 1080.
RGB	Red, green and blue, the three numbers that make each colour pixel.
Sentiment analysis	Working out whether a piece of writing is happy or unhappy.
Test data	New examples kept back to check how good the model really is.
Training	The learning step, when the model looks at the examples.
Training data	The examples a model learns from.
