# Teacher guide

Timings, devices, camera privacy and chat safety

## Course at a glance

| # | Lesson | Minutes | Lab |
|---|---|---|---|
| 1 | Welcome: AI is all around you | 12 | – |
| 2 | Rules or learning? How AI learns | 14 | – |
| 3 | Data: features and labels | 14 | – |
| 4 | How computers see: pixels | 13 | pixel |
| 5 | Train your first AI model | 18 | classifier |
| 6 | How your AI decides: nearest neighbours | 14 | scatter |
| 7 | Testing: is your AI any good? | 18 | classifier |
| 8 | Decision trees: AI that asks questions | 15 | tree |
| 9 | Teaching AI to read: words and feelings | 15 | word |
| 10 | How chatbots write: predicting the next word | 15 | next-word |
| 11 | Talk to a real AI, safely | 18 | study helper |
| 12 | Fair AI: when data is unfair | 16 | scatter |
| 13 | Responsible AI: privacy, deepfakes and you | 15 | – |
| 14 | Final project: build and present your AI | 30 | classifier |
| 15 | Final assessment and celebration | 15 | – |

Total about 4 hours of guided time. Most schools run it as 8 to 10 class periods. No kit and no coding needed.

## Devices

- Any modern browser on a computer, tablet or phone. A mouse, stylus or finger works for drawing.
- The camera is optional: lessons 7 and 14 offer it, and drawing works everywhere instead.
- Headphones help when the class watches videos at their own pace.

## Camera privacy

Camera pictures are shrunk to a 12 × 9 colour grid and used only inside the page. They are never uploaded or saved; reloading the page clears them. Encourage students to train on objects or hand signs, not faces.

# Study helper (lesson 11) safety

- Runs only inside the lesson, for students on the course and staff previewing it.
- Messages with phone numbers, emails, addresses, names, schools or passwords are blocked before they reach the AI.
- Unsafe topics are refused; when the platform uses OpenAI, every message and reply also passes OpenAI's moderation check.
- Short, child-friendly answers; it encourages hints over finished homework.
- Each student can send 30 messages a day. Conversations are not stored; the school can see how much the helper is used.
- If the helper is switched off for your school, students can still finish the lesson.

## Reviewing the final project

Projects appear under **Robotics & AI → Project reviews**. The model the student trained in the project lesson (labels, number of examples, test accuracy and test rounds) is attached automatically, next to their note, screenshots and link. Use the assessment rubric.

## Classroom tips

- Discuss lesson 2's "rules or learning?" sort as a whole class before students try it.
- Do the unplugged cards before lessons 6 and 8.
- In lesson 7, celebrate honest testing: a model that is 70% accurate and tested fairly beats a 100% that was only tested on its own training drawings.
- Lesson 12 works well as a discussion: who could an unfair AI let down at our school?
